(54) PREPARATION FOR AUTOMATIC FOCUSING

(57) Abstract:

PURPOSE: To improve the accuracy of focussing by coating slide glass with a mixture of an object to be observed with markers for automatic focussing.

CONSTITUTION: An object 3 to be observed such as cells or blood corpuscles is mixed with markers 2 for focussing so that several markers 2 are distributed in each field of view, and slide glass 1 is coated with the mixture. The superposition of the markers 2 on the object 3 can be prevented, and the markers 2 and the object 3 have the almost same thickness, so the accuracy of focussing is improved.
